43+ YEARS OF CCFMG

For more than 43 years, CCFMG has provided strategic and administrative support to our physicians and advanced practice providers to expand and meet the growing medical needs of our community.

Through our partnerships with more than 20 local health care organizations and facilities, we continue to ensure our clinicians have a variety of hospital, clinical, and academic settings where they can provide much-needed care to the growing Central Valley patient population while pursuing their clinical interests.

The graphic below highlights the opportunities our physicians have to impact the care of our community, as inspired by and aligned with their ambitions and desired work. Whether one's interests lie heavily in research, teaching, or private practice, CCFMG provides numerous pathways for our physicians to pursue success and fulfillment.

WHAT WE DO

Since our founding in 1979, Central California Faculty Medical Group has been committed to caring for today's patients while teaching tomorrow's doctors.

Our unique partnership with the UCSF School of Medicine allows our physicians to hold faculty appointments with UCSF to teach through the UCSF Fresno branch campus while also caring for patients in various hospital and clinic settings throughout the Valley. Our network of more than 230 UCSF faculty physicians and 100 advanced practice providers has expertise in more than 75 specialties and subspecialties, delivering an extensive knowledge base for learners and patients alike.

Whether in a hospital, the Federally Qualified Health Centers, or our private practice offices, we provide our patients and learners the same extraordinary care and education they expect to receive in larger metropolitan cities.

At CCFMG and the University Centers of Excellence, we are dedicated to conducting cutting-edge research and providing exceptional medical education. By growing our faculty of specialists and providers, **world-class treatment becomes minutes, not hours, away.**

CCFMG STRIVES TO BE THE TOP PHYSICIAN-OWNED MEDICAL GROUP OF CHOICE, PROVIDING EXCEPTIONAL CARE WHILE TRAINING THE NEXT GENERATION OF HEALTH CARE LEADERS.

When CCFMG opened our first private practice office in 1984, our goal was to give our community unprecedented access to UCSF faculty physicians. This tradition of access to our expert clinicians continues to this day. Through the University Centers of Excellence, CCFMG's faculty private practice arm, patients can access the same level of care they expect to receive in larger cities, close to home.

Our University Centers of Excellence sites provide patients access to more than 90 specialized clinicians. Patients can receive on-site casting and bracing at University Orthopaedic Associates and have their echocardiogram completed at University Cardiovascular Center. Wound care, Mohs Micrographic Surgery, and FibroScan are all services provided at University Centers of Excellence sites. Physicians, advanced practitioners, and staff at CCFMG and the University Centers of Excellence strive to provide every patient the care they need and deserve through 12 faculty practice sites.

Caring for patients through the University Centers of Excellence allows CCFMG faculty physicians to expand our footprint to continue meeting the growing needs of our Central Valley patients.

University Centers of Excellence means excellence in care with cutting-edge, innovative services and service lines. It means excellence in care through access to groundbreaking research and expert knowledge. Most importantly, it means excellence in care by placing trust in the hands of our renowned physicians, who are dedicated to exceptional results and always doing what is right for our community and for **every patient every step of the way.**

We provide comprehensive, high-quality cardiovascular care to patients in the Central Valley.

Services

- **Adolescent/pediatric dermatology**
(newborn to 18-years-old)
- **Cosmetic dermatology**
- **Dermatology surgery**
- **General dermatology**
- **Mohs micrographic surgery**
 We are one of a limited number of practices in the Central Valley to offer patients access to a dermatologist board certified in Mohs Micrographic Surgery. Mohs surgery involves removing skin cancers on areas of the body (ears, nose, near eyes) where it is especially desirable to preserve as much normal skin tissue as possible. The Mohs surgeon acts as both surgeon and pathologist at the microscope, taking care to confirm all skin cancer is removed before the skin is surgically repaired – all on the same day. This procedure has been shown to limit recurrent skin cancers and preserves as much normal anatomy and skin as possible. Clinical studies have shown that Mohs surgery provides five-year cure rates approaching 99% for new cancers and 95% for recurrent cancers.
- **Photodynamic therapy**
 This treatment combines drug therapy with light energy to treat diseases in a targeted way. The patient first takes a drug called a photosensitizer. Then the physician uses a laser, or similar device, to apply a specific wavelength of light energy, which activates the drug in the desired location. Photodynamic therapy can be used to treat various diseases, including cancer, acne, and some bacterial, fungal, and viral infections.
- **Phototherapy**
 Phototherapy or light therapy involves exposing the skin to ultraviolet light on a regular basis to help treat skin problems like psoriasis and eczema. University Dermatology Associates provides medical supervision for phototherapy or works with patients to complete the therapy at home using a portable phototherapy unit.
